

BOOT CARE GUIDE

RUJO Boots are built with superior quality calfskin hides and exotic skins. As with all-natural materials, a bit of TLC goes a long way in maintaining appearance and performance.

STORAGE

When not being worn, RUJO boots should be stored in dry temperature-controlled places.

If boots are stored for long periods we suggest stuffing them with tissue or paper.

CLEANING

Calfskin, Caiman, and Ostrich should be cleaned with a soft damp cloth.

Following cleaning, a conditioner should be applied.

POLISHING & BUFFING

If polishing is needed, a clear or matching color polish should follow the application of the conditioner. Suede boots can be cleaned with specifically designed cleaners or suede “erasers”. Buffing with a suede brush can improve the appearance both before and after cleaning. Do not wash or polish suede boots.

The amount and frequency of wear will determine the life of the boots. Basic care will significantly extend the life and enjoyment of your boots.

There are a wide variety of cleaners available that we also recommend on our website.
